linkedin.com/in/deepakmehta052 | github.com/Deepak052

EDUCATION

Sagar Institute of Research & Technology

B.Tech in Computer Science & Engineering | CGPA: 7.92/10

Bhopal, India

2020 – 2024

TECHNICAL SKILLS

Frontend: React.js, Redux Toolkit, Tailwind CSS

Backend & APIs: Node.js, Express.js, RESTful API Design, JWT Authentication, WebSocket (Socket.io)

Languages: JavaScript (ES6+), HTML5, CSS3

Databases: MongoDB (Mongoose), MySQL

Tools & Platforms: Git/GitHub, Postman, Figma, Vercel, Razorpay, VSCode

EXPERIENCE

Frontend Developer

Apr 2025 – Present

DOJ App Pvt. Ltd. (Food Delivery Platform)

Noida, India

- Architected the complete **frontend ecosystem** — User Website, Partner App, and Super Admin Panel — using **React.js, Redux Toolkit, and Tailwind CSS**, enabling a unified codebase across 3 distinct user surfaces.
- Engineered **real-time order and rider tracking** using **WebSockets (Socket.io)**, delivering live UI state updates with sub-second latency — directly mirroring core delivery tracking infrastructure.
- Designed end-to-end **authentication and role-based onboarding flows** for users and delivery partners, enforcing conditional UI rendering based on JWT-decoded roles.
- Integrated **10+ REST API modules** — cart, orders, payments, wallet, coupons, and cashback — with normalized Redux state, reducing redundant API calls and improving perceived load speed.
- Shipped **Razorpay payment gateway** integration end-to-end, handling order initiation, webhook callbacks, and payment status reconciliation on the frontend.
- Improved frontend performance through **code splitting, memoization**, and reusable component architecture — reducing bundle size and initial load time.

React Developer Intern

Dec 2024 – Mar 2025

DOJ App Pvt. Ltd. (Food Delivery Platform)

Noida, India

- Built the **Doj food delivery web application from scratch** using React.js, Hooks, and Tailwind CSS — shipping a production-ready product in under 4 months.
- Delivered **pixel-perfect, responsive UI** across mobile, tablet, and desktop by translating Figma designs with zero layout drift.
- Developed a **reusable component library** of 20+ components, accelerating feature development velocity by approximately **30%**.
- Integrated **RESTful APIs via Axios** with centralized error handling and loading state management for a seamless user experience.

PROJECTS

ShopSphere — Full Stack E-Commerce Platform | React.js, Redux Toolkit, Node.js, Express.js, MongoDB, Tailwind CSS

- Designed and built a **production-grade REST API** backend using Node.js and Express.js, connected to a **MongoDB** database via Mongoose with normalized schemas for products, users, and orders.
- Implemented **secure JWT + Bcrypt authentication** on the backend; managed auth state globally via Redux Toolkit with protected route enforcement on the frontend.
- Developed API endpoints covering full **product CRUD, cart management, and order processing**, with role separation between admin and customer flows.

GupShup — Real-Time Chat Application | React.js, Node.js, Express.js, Socket.io, MongoDB

- Implemented **bidirectional real-time messaging** using Socket.io, achieving sub-100ms message delivery with live typing indicators and online presence status.
- Modeled **MongoDB schemas** for efficient chat history storage, user relationships, and room-based conversation threading.
- Built a concurrent **Express.js server** handling both WebSocket connections and HTTP API requests, with clean separation of socket and REST logic.
